

This form should be used for all taxonomic proposals. Please complete all those modules that are applicable (and then delete the unwanted sections). For guidance, see the notes written in blue and the separate document "Help with completing a taxonomic proposal"

Please try to keep related proposals within a single document; you can copy the modules to create more than one genus within a new family, for example.

MODULE 1: **TITLE, AUTHORS, etc**

Code assigned:	2011.005abB	(to be completed by ICTV officers)			
Short title: Correct errors in genus "BPP-1-like viruses" (proposed name <i>Bpp1likevirus</i>) (e.g. 6 new species in the genus <i>Zetavirus</i>)					
Modules attached (modules 1 and 9 are required)	1 <input checked="" type="checkbox"/> 6 <input type="checkbox"/>	2 <input type="checkbox"/> 7 <input checked="" type="checkbox"/>	3 <input type="checkbox"/> 8 <input checked="" type="checkbox"/>	4 <input type="checkbox"/> 9 <input type="checkbox"/>	5 <input type="checkbox"/>

Author(s) with e-mail address(es) of the proposer:

Mike Adams (mike.adams@bbsrc.ac.uk)
Rob Lavigne (rob.lavigne@biw.kuleuven.be)

List the ICTV study group(s) that have seen this proposal:

A list of study groups and contacts is provided at <http://www.ictvonline.org/subcommittees.asp> . If in doubt, contact the appropriate subcommittee chair (fungal, invertebrate, plant, prokaryote or vertebrate viruses)

Prokaryote SC

ICTV-EC or Study Group comments and response of the proposer:

Date first submitted to ICTV:

Date of this revision (if different to above):

MODULE 7: **REMOVE and MOVE**

Use this module whenever an existing taxon needs to be removed:

- Either to abolish a taxon entirely (when only part (a) needs to be completed)
- Or to move a taxon and re-assign it e.g. when a species is moved from one genus to another (when BOTH parts (a) and (b) should be completed)

Part (a) taxon/taxa to be removed or moved

Code	<i>2011.005aB</i>	(assigned by ICTV officers)
To remove the following taxon (or taxa) from their present position:		
<i>Salmonella phage BPP-1</i>		
The present taxonomic position of these taxon/taxa:		
Genus:	‘BPP-1-like viruses’	Fill in all that apply.
Subfamily:		
Family:	<i>Podoviridae</i>	
Order:	<i>Caudovirales</i>	
If the taxon/taxa are to be abolished (i.e. not reassigned to another taxon) write “yes” in the box on the right		YES
Reasons to justify the removal:		
Explain why the taxon (or taxa) should be removed		
See Module 8		

MODULE 8: **NON-STANDARD**

Template for any proposal not covered by modules 2-7. This includes proposals to change the name of existing taxa (but note that stability of nomenclature is encouraged wherever possible).

non-standard proposal

Code	2011.005bB	(assigned by ICTV officers)
Title of proposal: Designate <i>Bordetella phage BPP-1</i> as the type species of the genus 'BPP-1-like viruses' (proposed name <i>Bpp1likevirus</i>)		

Text of proposal:

The MSL lists the following 3 species in the genus 'BPP-1-like viruses', family *Podoviridae*, order *Caudovirales*:

Bordetella phage BPP-1
Burkholderia phage BcepC6B
Salmonella phage BPP-1 (type species)

The relevant proposals were:

2008.025B created the species *Burkholderia phage BcepC6B*
2008.026B created the species *Bordetella phage BPP-1*
2008.027-28B created the new genus
2008.029B assigned the two species *Bordetella phage BPP-1* and *Burkholderia phage BcepC6B* (proposed in 2008.025B and -026B) to the new genus
2008.030B designated *Salmonella phage BPP-1* as the type species

A mistake was made in the box on the proposal form. The type species was named *Salmonella phage BPP-1* when *Bordetella phage BPP-1* was intended. This is clear from comments elsewhere in the proposal. *Salmonella phage BPP-1*, although assigned as a type species (and ratified as such), is not actually created by this proposal but has found its way onto the MSL by virtue of its status as type species.
